

Task 2: Phishing Email Detection & Awareness Report

Intern Name: Chhailbihari Angira

Date: June 20, 2026

1. Objective

The objective of this task is to analyze phishing email samples, identify common threat indicators, and establish user awareness guidelines to mitigate email-based security risks.

2. Phishing Analysis

After analyzing a sample phishing email, the following malicious indicators were identified:

- **Spoofed Sender:** The sender's email address utilized a look-alike domain (e.g., misspelled domain name) to mimic an official entity.
- **Urgent Tone:** The email content employed high-pressure, threatening language (e.g., "Account will be suspended in 24 hours") to force immediate, impulsive action from the user.
- **Suspicious Hyperlinks:** Hovering over the provided links revealed a destination URL that did not match the official website of the supposed sender.

3. Classification

- **Status:** PHISHING
- **Risk Level:** High

4. Prevention & Awareness Guidelines

To protect against such threats, the following best practices are recommended:

1. **Verify Sender Identity:** Always carefully inspect the sender's full email address and domain.
2. **Inspect Links:** Before clicking, hover your cursor over any hyperlink to verify the actual destination URL.
3. **Maintain Composure:** Be skeptical of emails demanding urgent action or threatening account suspension; verify such claims through official support channels.
4. **Report Threats:** Use the "Report Phishing" or "Mark as Spam" functions in your email client to notify security teams.
